REPLY TO  
ATTENTION OF DACA-CAD

22 December 1983

SUBJECT: Military Occupational Specialty Training Cost Handbook (MOSB)

SEE DISTRIBUTION

1. Attached is a revised Military Occupational Specialty Training Cost Handbook (MOSB), dated October 1983. This single volume replaces Volume I and Volume II, MOSB, dated October 1981, and Revision 1, dated 17 March 1982.
2. This edition of MOSB differs from the previous in three ways.
  - a. The size of the report has been reduced by changing the display format.
  - b. The following additional information is provided:
    - (1) Course costs from TRADOC's FY 83 ATRM-159 Reports.
    - (2) Course-specialty cross reference list.
  - c. The costs were updated as follows:
    - (1) Course costs from FY 83 ATRM-159 were used, where possible.
    - (2) Costs of remaining courses were inflated to FY 83 dollars.
3. This edition of MOSB is intended to be a provisional training cost document. It does not contain any significant departures from previous editions. A new network-based methodology for determining training costs is currently under development.
4. Any questions or comments concerning occupational specialty costing in general should be addressed to Commander, U. S. Army Finance and Accounting Center, ATTN: DACA-CAD, Indianapolis, IN 46249, or telephonically to either Mr. Joules or Mr. Geissler, Autovon 699-2674.

## FOREWORD

The majority of the data in this handbook is grouped into three major training cost areas: 1) officers, 2) warrant officers and 3) enlisted personnel. Appendix A contains cumulative training costs. Appendices B and C contain supporting information, while Appendix D contains the distribution list.

In the Description, the explanation of enlisted training costs serves as a general explanation of all three training cost areas. Explanation of officer and warrant officer costs are organized in terms of their deviations from the enlisted case.

Cumulative training costs (Appendix A) are subdivided into sections of officers, warrant officers and enlisted personnel. Each section is further subdivided into groupings of Specialty Skill Identifiers (or Military Occupational Specialties), Special Qualification Identifiers (officers excluded) and Additional Skill Identifiers. Within these groupings, the items are sorted in ascending order.

Individual course cost and related information is given in Appendix B. Obtained from ATRM-159 report data issued in FY 1983 by TRADOC, the information indicates the cost of each training event in the series of events that leads to an individual's acquisition of skilled status. This appendix contains information only on courses that were taught by TRADOC schools in FY 1981. It is not a comprehensive listing of the courses that appear in the handbook. A comprehensive list of courses used in this MOSB is given in Appendix C, which contains a cross-reference of course events and the specialties that require them.

The organization of this issue of the MOSB has been structured with the goal of best serving the needs of the user. Changes incorporated in this issue have resulted from experience with user problems, questions and suggestions. This report has been approved by the Director of Cost Analysis, Office of the Comptroller of the Army. Comments are encouraged. Please contact:

## ENLISTED DESCRIPTION

### 1. Overview

a. "What is the 'cost' of a soldier?" This question is frequently asked by congressmen, newsmen and cost analysts. The question seems deceptively simple until the key issue is raised, "What kind of a soldier does the questioner have in mind?" There are significant variations among soldiers. The cost of maintaining the average man in the Army would be different than the cost of maintaining the average enlisted man in the Army. The cost of maintaining an Electronic Warfare/Signal Intelligence Analyst would be different than the cost of maintaining an Infantryman. One of the significant cost variables that is responsive to the occupational specialty of the soldier is the expense associated with the training of new personnel in the replacement stream. The replacement personnel are needed to compensate for losses due to normal attrition from the Army. The cost of training this replacement stream is generated during the formal individual training programs conducted at Army training centers (ATC's) and Army schools. This formal training provides technical, administrative or combat skills to the soldier. Occupational skills are identified by assigning to the enlisted person or warrant officer a Military Occupational Specialty (MOS) code. In this handbook, the commissioned officer equivalent is called a Special Skill Identifier (SSI).

b. The cost of formal training consists of costs specific to courses themselves as well as such student-specific items as pay, travel and per diem. The bulk of course costs are estimated by prorating to the courses proportional shares of various support and school/ATC costs. School and ATC costs are prorated on the basis of workload. A share of the cost of TOE units stationed at the installation is prorated to the courses based on the degree of support rendered. Appropriate shares of the costs of the military bases at which the schools and/or ATC's are located and installation support activities (such as hospitals) are assigned to the courses. In this manner, the cost per graduate is estimated for each course.

c. Course cost data is further refined by sub-identification of fixed and variable portions of the cost per graduate. Variable costs are based primarily on historical trend analysis of data collected at the facilities where the specific training was given. Current variable costs shown are proportionally derived from average incremental cost changes observed as student levels varied.

d. MOS training costs are the cumulative expenses of all the formal courses needed to render an individual eligible for an MOS skill level. The training events start with reception station processing followed by basic training or one station unit training (OSUT) and includes all prerequisite

formal courses needed to arrive at the skill level being costed. The total cost of these courses represents the chain of events that results when a given MOS personnel space is added to increase the size of the Army.

e. The cost of training excludes major construction and identifiable one-time special expenses. The costs included are recurring operating expenses such as: (1) military pay and allowances for the student himself, for the training facility staff and faculty, and for personnel of the support activities, the military garrison, and TOE units rendering support to the training effort, (2) operation utilities, etc., for training facilities, support activities and the military garrison, (3) ammunition expended in training, and (4) average annual replacement cost of equipment.

f. In summary, the Army system of collecting training cost data is essentially a proration of costs to formal training courses. The costs prorated are the operating costs of the schools, Army training centers, and the military installations where those training facilities are located. The variable portion of the course cost is estimated based on historical trend analysis. Course costs per graduate are aggregated for the sequence of courses that is required for a given MOS skill level. This represents the total training cost for that MOS skill level and it is the cumulative MOS cost that is published in the Military Occupational Speciality Training Cost Handbook (MOSB).

## 2. Discussion

a. MOS training is a substantial part of the cost of a soldier and MOS training costs account for roughly 10% of the Army Budget. The publication of the MOSB is intended to fill a vital gap in the area often labeled "The Cost of a Soldier". Too often the cost of a soldier is quoted solely in terms of pay and allowances and possibly the value of supplementary benefits such as retirement, health, and dental care. While this framework might appropriately be used to describe the functioning soldier, it does not take into account the soldier as a trainee. When a soldier is training, he is not producing benefits for the Army, but is incurring a number of training-dedicated costs that are not reflected in the conventional costing described above.

b. An examination of one of the patterns of initial entry training will illustrate where these training-dedicated costs are incurred. Many enlisted personnel entering the Army for the first time are required to undergo from 7 to 8 weeks of basic training, which is conducted at several different Army training centers. This training, which is standardized throughout the training establishment, is designed to provide the soldier with the basic skills and knowledge required to fight and survive in the field. Upon graduation from basic training, the soldier may take one of four routes to further training. Upon completion of one of the four routes, the enlisted soldier is qualified for assignment to a unit, where he can perform the duties of his MOS as a member of a squad, team, or crew. The four routes are:

( ) Assignment to a TOE unit for on-the-job training (OJT) to qualify in an MOS or because skills required for an MOS have been obtained in civilian life prior to Army entry.

(2) Assignment to a training center to participate in advanced individual training (AIT) to qualify in a specific MOS in Infantry, Artillery, Air Defense, Military Police, Armor, and Engineer Branches. This training is normally 6 to 12 weeks in length.

(3) Assignment to a training center that conducts combat support training (CST) to qualify in specialties such as clerk, clerk-typist, supply clerk, cook, wheeled vehicle mechanic, light truck driver, and others. This training ranges in length from 7 to 10 weeks, depending on MOS and specialty.

(4) Assignment to a service school to qualify in an MOS requiring more advanced technical training. This training, which varies in length from 4 to 47 weeks, is conducted at a number of different schools and qualifies the individual in MOS's related to Signal, Air Defense, Artillery, Ordnance, Quartermaster, Engineer, Finance, Adjutant General, and other branch areas of specialty. Assignment to a service school can occur directly after basic training, after a period of OJT with a unit, or after advanced training at an Army training center (see Chart A). Upon completion of one of the four routes, the enlisted soldier is qualified for assignment to a unit, where he can perform the duties of his MOS as a member of a squad, team, or crew.

c. Of these four routes (para 2b, above) only routes 2, 3 and 4 have formal training courses associated with them. Route 1, OJT, involves the learning of a skill and the qualification for an MOS while performing the functions of that MOS skill in an operational unit. No method currently exists to identify what portion of the resources of the OJT soldier's unit is dedicated to MOS training of the individual and what portion is dedicated to maintenance and operation of the unit. For this reason, it is beyond the scope of this handbook to deal with OJT-dedicated training costs. Instead, concentration is centered upon costing the formal training courses and accumulating these costs in MOS-producing training sequences. This approach assumes that OJT is accomplished as a designated task by personnel dedicated to unit operation.

d. Training cost data is collected on a course-by-course basis by TRADOC, the Health Services Command (HSC), and the various defense and sister service schools. MOSB relates course cost data to the MOS's produced by the courses and chains together specific prerequisite course costs to determine total training costs for each particular MOS. For example, MOS 35B, Electronic Instrument Repairer, has skill levels 10, 20, 30, and 40. Service school or Enlisted Personnel Management System (EPMS) qualifying courses exist that are prerequisite for achieving each of these skill levels. To train formally for qualification as a 35B20, an individual must have trained for 35B10 and must have undergone reception station processing, entry training (BT or OSUT), and leave/administration time. Therefore, the true training cost for 35B20 qualification is the accumulated cost of all previous courses and activities required, not just the 35B20 level course itself. This handbook accumulates those costs and presents them in a sequential format.

### 3. Rationale

a. The cost of qualifying for each MOS reported in this handbook is the cumulative cost of all formal training (training center and service school)

# TRAINING ROUTES

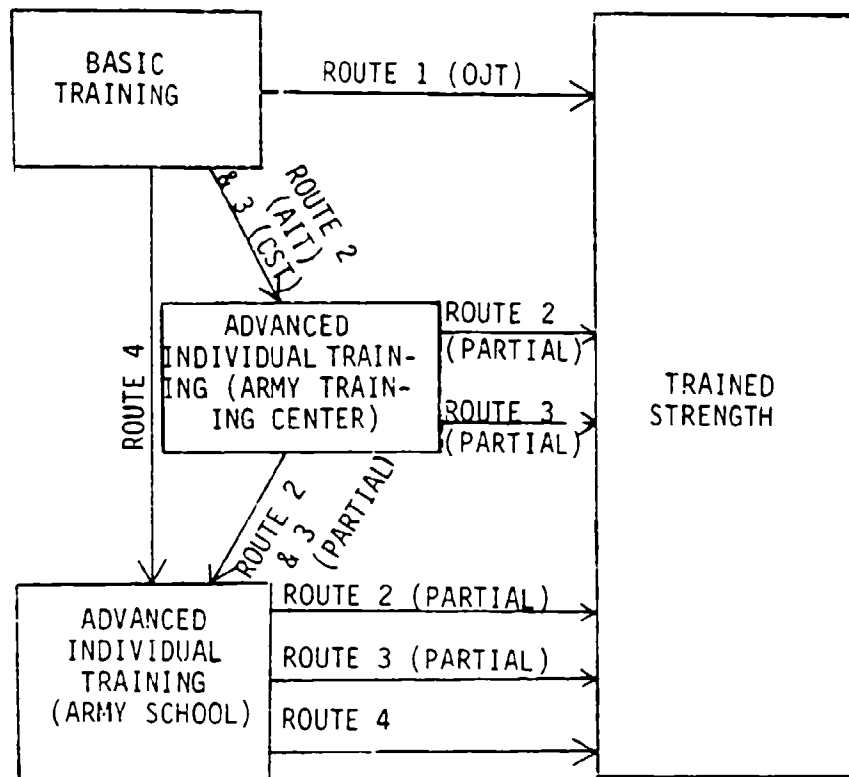

CHART A

needed to acquire MOS eligibility. This best represents the increment of training cost incurred when another MOS space is added to the Army. The courses and related activities to be included in the chain of costs are shown for each MOS under the title "event". If the course leads to a new skill level or MOS, the course number is followed by a code in parenthesis that shows the MOS skill level reached as a result of that specific course. For example, in the sequence for MOS 61C (pg. A-III-A-85), course number 652-61C20 provides MOS skill level 61C20.

b. MOS qualification costs are derived by following the most costly of officially recognized lines of progression from entry basic training to the skill level being costed. Only formal training costs at approved instructional facilities are included in training costs. OJT, which is encountered in units throughout the Army, is excluded.

c. Costs in this handbook are broken down into fixed and variable costs. Fixed costs are those costs which remain relatively constant even when the number of students in a course varies. Examples of this type of cost are depreciation of equipment, minimum consumption of utilities, pay of minimum grounds staff, etc. Of course, per capita fixed cost will rise with a decreasing number of students and will fall with an increasing number of students. This inverse proportionality of average costs to students distinguishes fixed cost from variable cost. Variable costs are directly proportional to the number of students; the more students, the higher the variable cost. Examples of variable costs are pay of increasing/decreasing number of instructors, expenditures for ammunition, etc. In contrast to per capita fixed costs, per capita variable costs remain about the same when the number of students changes. Equipment replacement cost is assumed to be entirely fixed as far as the number of students is concerned.

d. The variable portions of costs found in this handbook are based primarily on historical cost and manpower trend analysis of data collected at the facilities where the specific training was given. They represent a combination of current load sensitive incremental costs funded at three levels of administration, i.e. installation, instructional facility, and courses. The load sensitive costs are proportionally derived from historical observation of average incremental cost variations. An examination of Chart B will clarify the derivation of training costs.

e. To arrive at a cost for a particular MOS producing course, three levels of responsibility must be examined (installation, instructional facility, and course). Each level contributes to the final cost of the course. The highest level is the installation which usually is a fort. An installation is a group of facilities each of which supports a particular activity. Within the installation, the series of activities can vary widely. For example, Fort Prototype is broken up into the activities listed in Chart C.

f. Only a portion of the activities of any fort is related to training. However, the fort has a base operations "Z" account, a portion of which is used for the maintenance and operation of the training function. This "Z money" purchased service is provided to the second level of responsibility, the instructional facility (school or ATC), and it represents the major portion of the indirect costs of the school. Non-school costs also include Training Aids, Second Destination Transportation, Medical Activities,

# COSTS (FUNDING OF TRAINING)

CHART B

# ACTIVITIES OF FORT PROTOTYPE

CHART C

Communications, TOE units that provide support to the training center and like activities. (Non-school costs can also include the Department of Defense appropriation Family Housing Management Account, but it is excluded from MOSB.)

g. Money is being directly channeled to the installation by the organization responsible for the courses of instruction at the school. TRADOC has the basic responsibility for most of the Army schools and ATC's, but some training facilities are administered by DARCOM and HSC for specific materiel oriented and medical related programs of instruction. A few training activities are administered by other agencies. This money represents the direct school costs for the training in question (the OMA portion of this money is entirely accounted for in Budget Program 8T-Training).

h. The third level of responsibility is the actual MOS producing course. Each instructional facility has a number of these courses under its jurisdiction and the combined costs of all the courses within an instructional facility equals the total resident instruction costs of the instructional facility (Combat Development, Training Developments, and Non-Resident Instruction are excluded). Administrative costs of the school are prorated to the component courses. The indirect school costs, such as the "Z" account, are separately prorated down to the course level. The resulting course costs (both direct and indirect) have variable and fixed cost elements within them. The variable indirect costs are added to the variable direct costs to produce the variable course costs reported in this handbook. All costs represented in this handbook are expressed as "per normalized graduate" (the normalized graduate count includes adjustments to give appropriate weight to classes in session at the break between fiscal years).

i. A second set of variable cost values provided is the weighted average of OJT and formal training costs. The unweighted variable cost shows the variable cost that would be incurred if all personnel achieving the MOS skill level received formal training. As indicated in paragraph 2c above, not all holders of an MOS skill level receive formal training. Instead, some of personnel receive the MOS skill level based on OJT. Thus, the average variable cost of moving to a higher MOS skill level can be lower than the unweighted variable cost of the formal course. For example, MOS 05C (Radio Teletype Operator, pg A-III-A-10) shows both "variable" cumulative cost and "weighted variable" cumulative cost as \$3,593 through basic training. The two costs are equal since we assume all 05C personnel take the formal course of entry training. Both "variable" and "weighted variable" cumulative costs are shown as \$10,253 for step LV/AD1, since we assume all 05C personnel take the formal course, 201-05B20 at a cost of \$5,787. However, for skill level 05C30 the cumulative "variable" cost is \$25,204 while the cumulative "weighted variable" cost is \$23,101. This indicates that if all 05C personnel took course 5-CO-C40A, the additional cost to progress from 05C20 to 05C30 would be \$4,208. However, it is further assumed that a significant number of 05C personnel actually progress from 05C20 to 05C30 by OJT, which involves zero added cost. The weighted average cost of the step for those who made the progression by OJT and those who took course 5-CO-C40A is \$2,105, hence the cumulative "weighted variable cost" produces a cumulative cost of \$23,101.

j. Fixed cost (as it is broken out separately and as it is represented as a part of total cost) is spread over the number of "normalized graduates" per

course in order to arrive at a per capita training cost. As a result, average fixed cost and average total cost shown are valid only at the training load level for each course in a specific fiscal year and thus complicates its correct use.

k. Certain MOS qualification courses are taught in Navy, Air Force, DOD, and other agency schools. For example, MOS 96C, Interrogator, requires a language course taught at the Defense Language Institute in Monterey, California, while the O2 series, Bandsman, is taught at the Naval School of Music, Norfolk, VA. In these cases, course cost input was obtained from these non-Army sources and was appropriately adjusted to convey the same characteristics and appropriation significance as similar Army courses.

l. This handbook addresses the cost of each MOS required by the Force Cost Information System (FCIS). The array of MOS's in the FCIS is determined, in turn, by the manpower addressed in the Tables of Organization and Equipment (TOE's) of the force units included in the FCIS. Thus, some currently discontinued MOS's will still be carried in the MOSB until the TOE demand for the cost data ceases. Where discontinued MOS's are addressed, the most likely successor MOS's will be used as the pattern for the cost estimates. Also, some conceptual MOS's not yet in the force may have been included in the handbook where strong need has justified it.

#### 4. Methodology

a. The two major sources of cost information for this publication are TRADOC and Health Service Command (HSC). The cost documents issued by TRADOC are the ATRM-159 reports which contain course costs for TRADOC schools and training centers.

b. Costs were collected at the training installations and training facilities where training actually took place. Overall costs of installations and training facilities were reported along with data on workload, course length, number of graduates, etc., which permitted proration of installation and training facility costs to the specific courses within the training facility.

c. Inflation factors were used to bring these costs to FY 1983 dollars.

d. Courses taught at training facilities whose historical cost data were unavailable were estimated based on the cost characteristics of similar TRADOC training facilities. This holds true also for those non-Army training facilities where available cost data were incomplete or incompatibly formatted.

e. Total costs in the handbook may not add exactly due to rounding of numbers.

f. Sequence of events for formal training costs were developed using the MOS, SQI, ASI descriptions in AR 611-201. In addition DA Pam 351-4 was used to determine the formal courses available to Army personnel for MOS qualification and prerequisite events for each MOS-producing course. Enlisted Personnel Management System (EPMS) training options reflected herein are based on DA Pam

351-1. The overall pattern of EPMS alternatives is illustrated by Chart D.

g. Section III of Appendix A, Cumulative Training Cost Data, includes three sub-sections: Military Occupational Specialty (MOS) (pg. A-III-A-1), Special Qualification Indicators (SQI) (pg. A-III-B-1) and Additional Skill Identifiers (ASI) (pg. A-III-C-1). The format of the cumulative training cost data is the same for each of these three sub-sections.

(1) The data are shown in cumulative stages (bench-marks) as each new training event is added to the individual's experience. For example, MOS 00B (pg. A-III-A-1) shows that the first stage was reached as a result of average reception station processing. The next stage, titled Basic Training, adds the cost of average basic training to the cost of reception for a cumulative total cost of \$5,119. The next stage with title "433-00B1" adds the cost of USN Diving Course number 433-00B1 to the previous cost stage for a cumulative total cost of \$21,948. The next stage with MOS skill level title "(00B10)" adds the cost of leave after training and administrative processing time involved in entry into the Army but not otherwise covered. The cumulative total cost of this stage is shown as \$22,821.

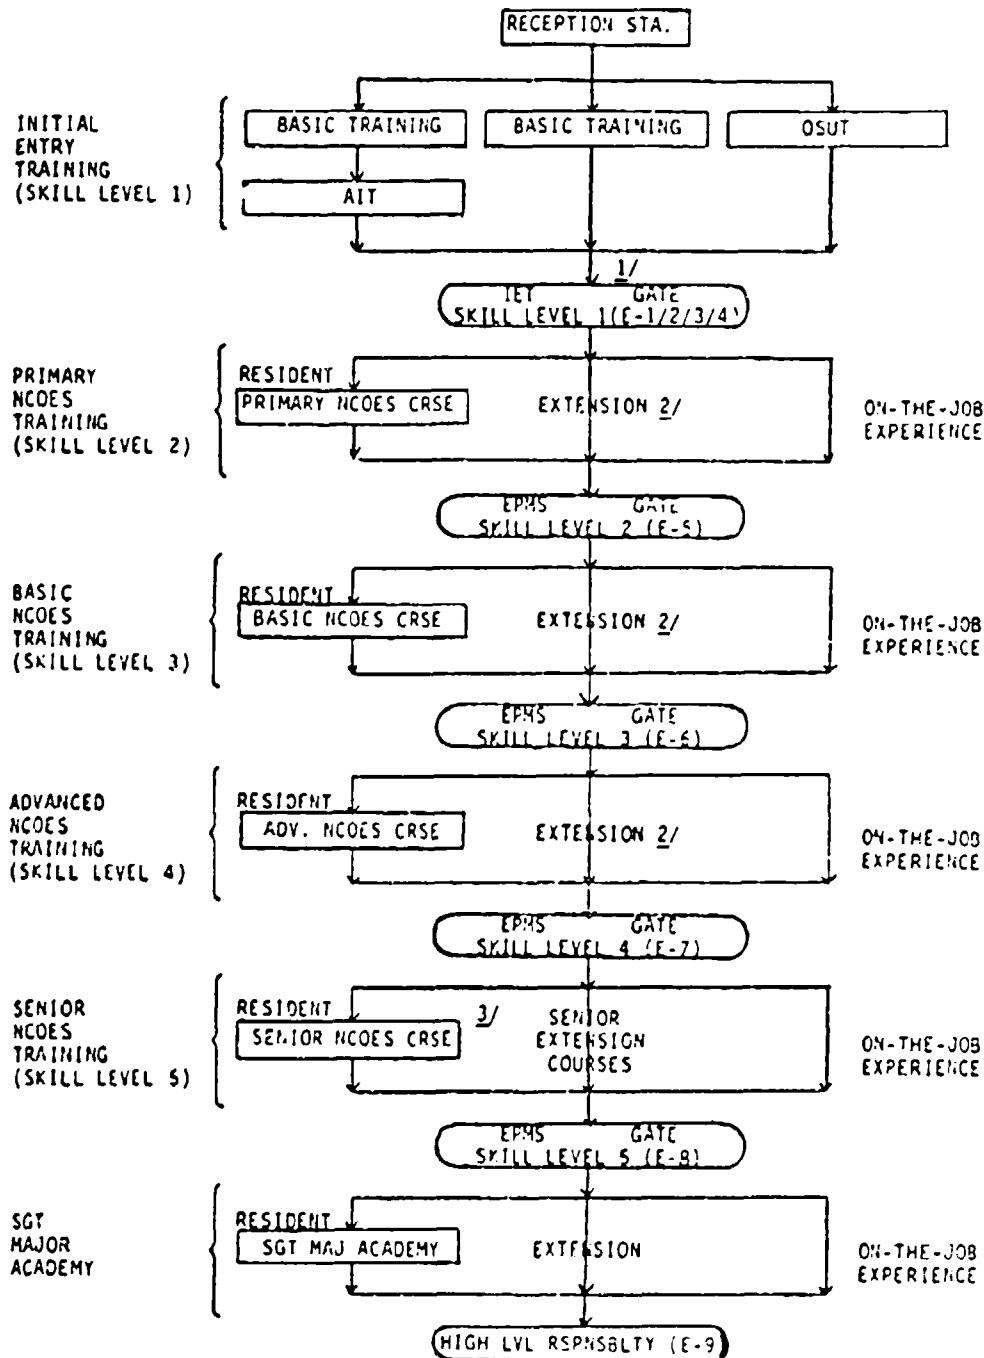

(2) Each stage shows both cumulative weeks and cumulative costs. Cumulative costs are shown as variable, fixed and total. A subsidiary breakout of variable cost is shown under weighted variable cost and depicts the overall average variable cost of reaching the stage. MOS 00B at the first stage shows .6 weeks of Army training center time and zero weeks of school time. It also shows total cumulative cost of \$728 broken out as \$474 variable and \$254 fixed. The overall weighted average variable costs for all personnel reaching the stage shown is \$474.

(3) The cumulative costs at each stage are broken out as "OMA" (Operations and Maintenance Army: e.g. civilian pay, supplies, etc.), "MPA" (Military Personnel Army: e.g. Military pay, etc.) and "PROC" (Procurement of Equipment and Ammunition: e.g. aircraft, trucks, etc.). The first stage of MOS 00B shows OMA variable as \$85, MPA variable as \$389 and PROC variable as zero.

h. Since cumulative costs for a particular MOS skill level are derived by adding the cost of all formal courses required to reach the level, the cost of a specific course can be derived from the cumulative data shown in the handbook. This is done by subtracting the preceding cumulative MOS cost level from the cumulative cost level that resulted from the course in question. For example, the cost of MOS skill level 52B30 (pg. A-III-A-75) was determined by adding the cost of course 6-MM-C40 to the cumulative cost of MOS skill level 52B20. Thus the variable cost of course 6-MM-C40 can be derived by subtracting the cumulative variable cost of 52B20 (\$16,381) from the cumulative variable cost of 52B30 (\$24,275). This shows the variable cost of course 6-MM-C40 to be \$7,894. To facilitate this use of the data (to derive the cost of an individual course or training related event), the cumulative total is shown at the addition of each increment regardless of whether or not a new skill level has been reached. Thus, the title of each cumulative cost stage (bench-mark) should be examined to determine whether or not it denotes a skill level.

# EPMS ALTERNATIVE TRAINING ROUTES

1/ SOME MOS'S MAY ALSO INCLUDE A "PRIMARY" COURSE; IT WILL BE FOR QUALIFICATION AT SKILL LEVEL 1.

2/ NOT APPLICABLE FOR COMBAT ARMS.

3/ REPRESENTS PROVISION FOR FUTURE PLANNING.

CHART D

(1) Each event shown in parenthesis represents arrival at a new MOS skill level. To identify the specific course or courses leading to this step, one should refer to all courses listed since the previous MOS skill level. For example, for MOS 24E (pg. A-III-A-33), MOS skill level 24E20 shows (24E20). The course leading directly to this skill level of MOS 24E is PLC (Primary Leadership Course).

(2) Each event shown without parenthesis represents partial progress toward the next MOS skill level. For example, MOS 00J (pg. A-III-A-2) shows an event with the title X-XX-C40. The lack of parenthesis on the title denotes that this stage is intermediate and was achieved with the acquisition of the course X-XX-C40. The full achievement of the target MOS skill level is not accomplished until the next cumulative cost stage.

i. The weighted variable cost shown at the right for each cumulative cost stage is the weighted average of all personnel: those personnel acquiring the training in a dedicated institution and those personnel acquiring the training as a by-product of service in an operational unit (OJT or OJE). The estimates of the proportion of personnel acquiring primary MOS's by formal training are based on extracts from the military personnel master records. For example, MOS skill level 11D4 (pg. A-III-A-13) had 196 members of whom 32 reached the level by institutional training (course 0-1A-C42BX). Thus, 16 percent formal training at a variable total cost of \$17,019 and 84 percent OJT at variable total cost of zero yields an average of \$2,761. Adding this \$2,761 to the \$21,959 cumulative weighted variable cost of stage 11D30 yields \$24,720, the cumulative "weighted average variable" cost shown for stage 11D40.

## 5. Utilization

a. The procedure chosen for analyzing data from the handbook must be compatible with user objectives. The handbook can be used for two distinct purposes: a) the costing of training alternatives, and (b) the construction, for planning purposes, of segments of total programmed formal training costs. The first task of the analyst is to define the problem in order to pinpoint which alternative purpose satisfies the particular analysis being performed.

b. If it is determined that the problem is one of cost alternatives, average variable cost should be used. This is because average variable cost is not constrained by student load level and alternatives can then be considered on a per capita basis without delineating a final student load on which to perform the analysis. Average variable cost on a per capita basis remains constant regardless of the number of students added or deleted from an MOS course. If the alternative under consideration entails increasing or decreasing the student load without activating or deactivating training installations, variable cost rates should be used. If the alternative entails activating or deactivating installations as a result of changing student load the change in total fixed costs would have to be included.

c. Caution is advised when using total or fixed costs. As reported in this handbook, total and fixed costs are valid only at the student load level existing when the costs were incurred. This information is available in Appendix B for course cost reported by TRADOC in the 1983 ATRM-159 reports.

Any other load level would imply a different per capita total and fixed cost than those given in this handbook. Therefore, multiplication of the fixed cost by the actual student load would yield total actual fixed cost for each course. Then, multiplication of the variable cost by the desired student load would provide the total projected variable cost for each course. The sum of the actual fixed cost and the projected variable cost for each course would be the total cost for the desired student load.

d. Most training cost inquiries can be handled using variable costs, but where exceptions occur caveats must be explicit. Ordinarily, the student load constraint and the assumption of activation/deactivation of training installations are irrelevant. For example, Congressional inquiries on training cost are normally concerned (directly or indirectly) with the cost increases to be sustained by the country given the addition of a particular kind of soldier to the force. Since this is a training alternative problem, it should normally be answered using variable cost factors. Total costs should be used only if the inquiry is so worded as to require total costs in the reply. The response should explicitly state that the cost figures are valid only at a specific fixed training load.

e. If the question deals with the cost of filling MOS spaces, the "weighted average variable" cost should be used. This will acknowledge the fact that some portion of the personnel advance from one skill level to another without a requirement for formal training outside the unit. This type of training cost is used in the Force Cost Information System (FCIS) and the Army Force Planning Cost Handbook (AFPOCH).

f. Within the framework of the variable, weighted average variable, and total costing approaches to the use of the costs in this handbook, there are a great number of specific uses for the information contained herein. The following list is representative but not exhaustive of the many uses for MOS training cost data.

(1) Variable Reenlistment Bonus (VRB) Justification. DCSPER and MILPERCEN use MOS training cost data to determine the costs of training E-4 and E-5 grade enlisted personnel in specialties that are being considered for SRB status. A combination of training cost and bonus cost indicates retention cost for specialty reenlistment and is useful in personnel policy planning and cost effectiveness analyses.

(2) Force Cost Information System (FCIS). The MOS training costs in this handbook are incorporated into the FCIS and, therefore, the FCIS provides unit training costs based upon the TOE-established personnel MOS requirements as computed by the established MOS cost chains. Weighted average variable cost is used for this purpose.

(3) Weapon Systems Operating Cost. The cost of training a crew for the operation of weapons systems can be estimated and is an important component in any cost effectiveness analysis (COEA) of alternative proposed weapon systems.

(4) New MOS Costing. Initial estimates of new MOS costs can be derived from existing similar MOS course costs. In addition, prerequisites to the proposed new MOS course can be established and an MOS sequence listing the prerequisites (and cumulative costs) can be developed to conclude with the

projected new MOS course. In this way, the entire formal training costs required for acquisition of the new MOS can be estimated for planning purposes.

(5) Congressional Fact Sheets. MOS training cost data can be used to support responses to many personnel cost inquiries from Congress. It is particularly important that variable costs be used in responding to Congress.

(6) MOS Trade-Off Analyses. The Army Military Occupational Specialty program is under constant scrutiny and revision. Inefficient MOS's (those which cost more to train, maintain, and retain than the worth of their output) are being reconstituted or even eliminated. In any MOS cost effectiveness analysis, a proper assessment of the cost of individual MOS training is necessary. The costs in the handbook are specifically suited for such analysis.

(7) Civilian Substitution. The MOSB costs have already been used in a study required by DOD dealing with the substitution of civilians for certain MOS categories that may not be supportable by military fill. Highly skilled combat support MOS's were identified and costed using the MOSB; comparative civilian costs for the same skills were developed and cost effectiveness trade-offs were made.

(8) Reserve Training. Aside from the active duty for training (ADT) performed by the enlisted reservist to acquire his initial MOS, most training is done either by correspondence course or OJT. This applies for reserve officers as well as enlisted personnel. However, there are cases where reservists go on active duty and train for particular MOS's in the same schools as active duty personnel. In such cases, individual course costs can be used to determine the cost of training the reservist. The individual course costs can be obtained by computing the incremental cost of the course in the sequence of cumulative costs for the MOS.

(9) Economic Analysis. The economic analysis detailed in AR 11-28 deals with acquisition of major materiel systems and requires consideration of the costs of all elements in the acquisition. The costs of training new MOS's can be determined as in paragraph f(1) above and are a necessary input to a complete economic analysis.

(10) Inappropriate Uses.

(a) Just as there are numerous possible uses for the data in the MOSB, there are also areas where it would be inappropriate to use these costs. For example, it is improper to use MOSB costs for budgeting. For budgeting purposes, the entire outlay of cash for a fixed cost item will occur at one time, but it will be amortized over a certain length of time. The fixed cost figures from MOSB contain amortized costs. Furthermore, the costs reported in MOSB may occur over more than one budget period.

(b) No attempt should be made to use MOSB costs to represent Army training costs in their entirety if the exercise requires consideration of OJT training and its associated costs. As has been stressed before in this description, any training costs incurred through OJT are excluded from consideration. Therefore, only the costs of formal training at recognized Army training centers and schools are included.

## OFFICER DESCRIPTION

### 1. Introduction

This chapter depicts the similarities and differences between commissioned officer and enlisted personnel training cost estimation. The preceding chapter presented rationale, methodology and utilization statements for enlisted personnel and this chapter presents the commissioned officer counterparts. The presentation format and end use remain the same although some unique features of commissioned officer training costs do exist.

### 2. Similarities to Enlisted Personnel Training Costs

a. As with the enlisted MOS, SQI and ASI cost, the format of a formal training sequence is used for presenting officer SSI and ASI costs. The training sequence used is the one that reflects to most formal training to acquire the minimum qualifications at each step. Therefore, the cost given represents the highest cost likely to be incurred by the Army to provide the minimum essential formal training specific to an SSI or ASI. However, career training events such as Officer Basic Course and Officer Advanced Course that are not skill-specific are included where necessary. This was done to reflect acquisition of the SSI at the junior officer entry levels shown in the report, SACS Personnel Computation ME, Grade/MOS Structure. SSI levels achieved are shown in parenthesis (e.g., SSI level 11A is shown in the stage of cumulative costs titled "(SSI 11A)" while the Secondary SSI level 11 is shown as a separate SSI with a stage of cumulative costs titled "(SEC 11)").

b. The weighted average variable training cost of filling an SSI space is given. This cost reflects the average mix of formal training and OJT (zero added training cost) at each skill level to be expected in filling the space.

c. The primary sources of cost data are TRADOC and HSC. The data are reported in FY83 dollars.

d. A fixed and variable cost breakdown is used in this handbook, with fixed cost proportions being based on a historical trend analysis using data collected at the facilities where training was given. Direct OMA costs are funded by the responsible training organization (TRADOC, HSC, other) and indirect costs are covered largely by the "Z" account of the installation where the training is given.

e. This issue of the handbook contains a section showing the training costs associated with the acquisition of Additional Skill Identifier (ASI) designations. (Commissioned officers have no Special Qualification Indicator codes - SQI's.) The ASI section starts on page A-I-B-1.

### 3. Features Unique to the Officer Training Costs

a. Today, ROTC accounts for the great majority of commissioned officers coming into the Officer Corps from civilian life. The officer training cost sequences found in this section account for the formal training that these officers receive after commissioning but exclude all precommissioning costs including the cost of ROTC training. The major reasons are listed below.

(1) Although there are identifiable variable costs associated with ROTC training, the size of the ROTC pool is a separate decision and does not necessarily fluctuate with changes in Army strength. Thus, the variable cost of ROTC training is not applicable to the costing of added officer strength. Since the primary concern of variable costing in this handbook is the cost effect of variation in the total end strength of the Army and since there is no such identifiable effect of ROTC, it is normally inappropriate to link ROTC variable costs into the cost sequence for officers.

(2) The scope of analysis established for this handbook examines OMA, MPA, and Procurement costs only, but the funding for ROTC involves other budget programs and appropriations.

b. Since officer personnel space specification codes in the Table of Organization and Equipment (TOE) often call for specific secondary SSI's, these secondary skills are also given in the handbook. The cost of formal training to acquire a secondary SSI is different than that of acquiring a primary SSI because certain events are not repeated (such as entry leave and administrative processing) and specific subsidiary skills within the broad area are not required (e.g. SSI 65B (pg. A-I-A-50) requires both Course 6-8-C20MSC SP and Course 6H-3418, but the secondary SSI requires only the Course 6-8-C20MSC SP). Secondary SSI's are shown with primary SSI's in the section starting on page A-I-A-1. The secondary SSI cost is the first set of data shown for each principal specialty. For example, the SSI's starting with the number "11" have "2-7-C20 IN (SEC 11)" as the first set of cost data. This is the secondary specialty version of the principal specialty, Infantry, and it shows a total training cost of \$20,301.

c. The sequences of events for formal training were developed using the SSI and ASI descriptions in AR 611-101. In addition, DA Pam 351-4 was used to determine the formal courses available to Army personnel and prerequisite events for those courses.

d. Aviator training performed in operating force units is an exception to the assumption that OJT is received as a zero cost "by-product" of normal operation of the unit. Since aircraft flying hours consume both parts and POL, there is an added cost associated with practice flying that is done in excess of normal operational flying of the unit. This flying-hour cost of the aircraft is the expenditure that is reflected in the "courses", AVNOJTRW and AVNOJTFW, which represent aviation OJT skill qualification for Rotary Wing and Fixed Wing aircraft respectively. For example, ASI 2C (pg. A-I-B-3), U-1 Pilot, shows "AVNOJTFW" as one of the elements of training leading to that designation.

e. Except for one cost element, the distinction between resources dedicated to teaching versus medical care in Army Medical Centers (MEDCEN's)

is beyond the scope of the handbook. Intern-resident personnel perform useful work at MEDCEN's and considerably reduce the number of fully trained medical care positions required for the primary objective of medical care. A weighting procedure has been devised that recognizes the gradient between the predominately productive nature of a senior resident's time and the predominately training nature of an entrant's time. The net teaching cost of this phase-in is the average cost shown for internship-residency in this handbook. The time devoted to internship-residency varies by specialty but always exceeds two years. Instead of designing software to deal with the exceptionally long period of training, computer programmers have shown 1.0 weeks as training time for internship-residency in MEDCEN's.

## WARRANT OFFICER DESCRIPTION

### 1. Introduction

This chapter depicts the similarities and differences between warrant officer and enlisted personnel training cost estimation. Warrant officer training extends enlisted training. The primary source of entry into the warrant officer ranks is the pool of talented NCO's who apply for the warrant officer program after many years in the enlisted ranks. Because of this, warrant officers at entry into the program are usually older than junior officers and the first term enlisted person. Since warrant officers normally have extensive enlisted experience, they also have extensive formal enlisted MOS training. The cost of pre-warrant training is an integral part of the true training cost because the NCO space left vacant by the new warrant officer will need to be filled. In addition, the enlisted MOS possessed by the new warrant before entry is usually the qualification required for entry to the warrant program.

### 2. Similarities to Enlisted Personnel Training Costs

a. As with the enlisted MOS's, the format of a formal training sequence is used. OJT training costs are estimated as zero (except flying OJT) and only formal training at ATC's or Army schools is included in the costing sequence. As before, the most costly formal training sequence that yields the minimum qualifications is used. Therefore, the costs given represent the highest training costs likely to be incurred for acquisition of MOS qualification. Again, the weighted average variable training cost of filling the MOS space is shown to reflect the mix of formal training and OJT to be expected.

b. The primary sources of cost data are TRADOC and HSC. The data are reported in FY83 dollars.

c. A fixed and variable cost breakdown is used in this handbook with the variable cost being based on a historical trend analysis using data collected at the facilities where training was given. Direct OMA costs are funded by the responsible training organization (TRADOC, HSC, other) and indirect costs are covered largely by the "Z" account of the installation where the training is given.

d. This issue of the handbook has separate sections covering Special Qualification Indicator (SQI) and Additional Skill Identifier (ASI) costs. Both of these sections display the training costs (over and above MOS qualification training) associated with acquisition of the designation shown. The SQI section starts on page A-II-B-1 and the ASI section starts on page A-II-C-1.

### 3. Features Unique to Warrant Officer Training Costs

a. Each warrant officer MOS sequence in the handbook reflects at least basic training and reception, subsequent enlisted courses leading to warrant status and any MOS courses required as a warrant officer to obtain fully trained status. In many cases a choice logically exists as to whether a course would be taken as an enlisted man prior to warrant appointment or as a warrant officer after appointment. In these cases the assumption is made that warrant status is already attained when the course is taken (since student costs are higher after appointment, this decision follows the "most expensive" cost chain rationale being used throughout this handbook).

b. Costs as reported in this handbook appear to indicate that warrant officer MOS training is more expensive than commissioned officer training. However, warrant officer pre-appointment courses and costs are included in the formal training sequence, while officer precommissioning costs are not. If the factors cited in Officer Description, paragraph 3a (commissioned officer ROTC precommissioning costs) were included in officer training costs, warrant officer training would no longer appear to be typically more expensive than commissioned officers training.

c. Aviator training performed in operating force units is an exception to the assumption that OJT is received as a zero cost "by-product" of normal unit operation. Since aircraft flying hours consume both parts and POL, there is an added cost associated with practice flying that is done in excess of the normal operational flying of the unit. This flying-hour cost of the aircraft is the expenditure that is reflected in the "courses", AVNOJTRW and AVNOJTFW, which represent aviation OJT skill qualification for rotary wing and fixed wing aircraft respectively. For example, MOS 100D (pg. A-II-A-4), Heavy Lift Helicopter Pilot, shows "AVNOJTRW" as the "capper course" leading to that MOS.

d. Chains of events for formal training costs were developed using MOS, SQI and ASI descriptions in AR 611-112. In addition DA Pam 351-4 was used to determine the formal courses available to Army personnel and prerequisite events for those courses.

e. Warrant officer MOS chains of events are especially long, so space constraints have necessitated the use of some extra abbreviations. The term "W" means "WO-F1", and "L1" means "LV/AD1".
